Space-Conscious Audio Solution with USB and iPod Playback

The CS-545 offers a carefully considered balance of performance, price, and practicality. Thanks to its compact size, this versatile audio mini system can be set up virtually anywhere in the home. Driving the system is a combined CD-receiver that handles regular CDs as well as recordable CDs encoded with compressed audio files. And the playback options don't stop there. A handy front-panel USB port accepts flash memory sticks, while a built-in iPhone/iPod dock lets you hook up and recharge your device. Naturally, given Onkyo's enviable track record in home audio, the processing and amplification circuitry are second to none. Completing the system are two precision-crafted bookshelf speakers featuring Onkyo's proprietary OMF diaphragms.

Built-in Dock for Direct Digital Connection of iPhone/iPod

In addition to handling CDs and USB flash drives, the CS-545 features a top-loading dock for iPhone/iPod. This direct digital connection allows you to access videos, podcasts, and music in AAC and MP3 formats. As the audio and video signals are transported in digital form, rather than analog, there is much less possibility of signal degradation. Tracks on your iPhone/iPod can be browsed, skipped, and shuffled using the accompanying remote control.

Front Panel USB Port for Flash Drives

Now you can use your flash drive as a music source for the whole room. Using the CS-545's front-panel USB port, you can access MP3 and WMA files from USB flash drives that support the USB Mass Storage Class standard. Once your device is connected, you can use the CS-545's remote control to play back your music.

Efficient Digital Amplifier Circuitry for Clean Audio Signals

The CS-545 employs digital amplifier circuitry to extract a noise-free signal from digital audio sources. Whether it's on a standard CD or in a compressed MP3 or WMA file stored on CD or USB, your music will sound clearer than ever. Because digital amplifiers can convert power with very high levels of efficiency, much less energy is wasted as heat. With no need for a bulky heat sink, the amplifier design can be smaller and lighter. That's a key reason why the CS-545 can provide room-filling power from such a small design.

Quality Speakers with Proprietary Onkyo Performance Features

The CS-545 includes a pair of two-way, bass-reflex speakers that incorporate a number of Onkyo speaker technologies. The woofer diaphragms are made from OMF (Onkyo Micro Fiber)—a durable material comprising molded layers of aramid and cotton. This material effectively absorbs unwanted vibrations while providing the stiffness needed to ensure a fast and accurate response. On the edge of the diaphragms, V-Line Edge also works to minimize unwanted vibration. Furthermore, each speaker features a soft-dome tweeter to deliver high-frequency sounds with greater finesse.
